Solar luminous system in Pakistan

Overview

Solar power in Pakistan is growing at the highest rate in the world, with solar installations providing an estimated one-third of the country's entire generating capacity added in 2024 alone. Solar power is now the largest electricity source in Pakistan, accounting for more than 25% of total production in 2025. As electricity prices doubled from 2021 to 2024, and Chinese solar panel manufacturers with manufacturing overcapacity cut prices, Pakistanis have taken to installing so.

From pharmaceuticals to cement manufacturers in Karachi, to textile units in Faisalabad, and from supermarkets to mosques in Lahore, solar panels paired with lithium batteries have been adopted as an alternative to electricity from the national grid.
