# Solar panel inventories increase

## Overview

---

Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW installed. Combined, solar and storage accounted for 82% of new capacity in the first half of the year.

Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW installed. Combined, solar and storage accounted for 82% of new capacity in the first half of the year.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW.

Overproduction at levels that far outweigh end demand is unsustainable for any industry, and from 2022 to 2024, the PV industry significantly overproduced, leading to major inventory growth and backing manufacturers into a corner. At the end of 2024, CRU Group believes global module inventory may.

With Corning's Michigan silicon ingot and wafer factory now online, the United States can produce all major components of the solar supply chain, the Solar Energy Industries Association said in a Wednesday release. SEIA also said that since the end of 2024, domestic manufacturing capacity has.

The Solar Energy Industries Association released a report stating the U.S. solar manufacturing capacity has increased significantly in Q2. Getty Images This audio is auto-generated. Please let us know if you have feedback. U.S. solar panel manufacturing capacity has increased 4-fold since the.

EIA is continuing normal publication schedules and data collection until further notice. In 2022, solar photovoltaic panel shipments in the United States increased 10% from 2021, setting another annual record (31.7 million peak kilowatts [kWp]), based on our latest published data. U.S. solar panel.
