# Solar system lifespan

## Overview

---

What determines the life of a solar system?

In closing, the life of a solar system is ultimately determined on how hard it is being pushed, the operating environment of the system and how it is designed to meet the demand of the application. For a more detailed explanation, watch the video below.

How long do solar panels last?

Racking systems for solar panels are also separate from solar panel warranties. These may incur damage from weather elements. Solar inverters generally last 10 to 15 years. This shortened lifespan is due to how hard inverters continually work to convert energy from the solar panels into usable electricity for your home.

How long does a solar inverter last?

Inverters, essential for converting DC to AC power, usually have shorter lifespans than solar panels. String inverters operate effectively for 10-15 years, while microinverters can exceed 20 years due to their advanced design and resilience.

Do solar panels need to be replaced after 25 years?

After 25 years, your solar panels won't necessarily need to be replaced; however, their ability to absorb sunlight will be reduced. In this blog, we'll explain how long solar panels last, review solar panel degradation rates, and ways to make sure your solar panels last as long as possible.

Are solar panels durable?

Solar panels are generally very durable. Most solar panels are designed and tested to withstand the elements like hail, high winds, and heavy snow loads. And thanks to their lack of moving parts, solar panel systems usually require little to no maintenance. Still, maintaining your solar panels can boost

production.

Do solar panels expire?

There is technically no expiration date on solar panels. However, over time, they naturally tend to become less efficient at producing energy. Some panels can also break due to physical damage from extreme weather conditions.
