

## Kongres Container

# Solar thin film exports

✓ **ALL IN ONE**

✓ **100Kw/174Kwh  
High Capacity**

✓ **Intelligent  
Integration**

## Overview

---

The move is expected to have significant ramifications for the global solar industry, given that cadmium telluride is a key material used in thin-film solar cells. China dominates global tellurium refining and CdTe production, meaning the export curbs could tighten global supply and boost prices.

The move is expected to have significant ramifications for the global solar industry, given that cadmium telluride is a key material used in thin-film solar cells. China dominates global tellurium refining and CdTe production, meaning the export curbs could tighten global supply and boost prices.

Restriction on cadmium telluride exports is expected to increase costs for U.S.-based thin-film solar manufacturer First Solar. Thin-film solar modules. China's Ministry of Commerce and General Administration of Customs jointly announced on February 4 that the country will impose export controls on.

China has announced new export restrictions on materials essential for the thin-film solar industry, including critical minerals such as tungsten, tellurium, and indium. China's Ministry of Commerce and General Administration of Customs has imposed export controls on tungsten, tellurium, bismuth.

On February 4th, the Ministry of Commerce, in conjunction with the General Administration of Customs, officially issued an announcement implementing export controls on items related to tungsten, tellurium, bismuth, molybdenum, and indium. Notably, cadmium telluride, a core material for thin-film.

The global thin film solar cells market was valued at USD 2.26 billion in 2023 and is estimated to grow at a CAGR of 9.2% from 2024 to 2032. Thin film solar cells are a type of photovoltaic (PV) technology used to convert sunlight into electricity. They are characterized by their thin layers of.

Based on Region, Asia Pacific is expected to dominate the global thin-film solar cell market. This dominance is primarily attributed to the region's large consumer base, rapid industrialization, and accelerated urbanization, which collectively drive substantial demand for alternative and.

The thin-film photovoltaic market is projected to grow from USD 6.2 billion in 2024 and is expected to reach USD 12.4 billion by 2029, growing at a CAGR of 15.1% from 2024 to 2029. Major players in the thin-film photovoltaic market include First Solar (US), KANEKA CORPORATION (Japan), Oxford.
