# Spanish energy storage projects included in regulations

## Overview

---

Approved on 24 June by the Spanish government, the Royal Decree-Law 7/2025 contains measures that aim to strengthen the resilience of the country's electrical system, including boosting electrification, storage and flexibility.

Approved on 24 June by the Spanish government, the Royal Decree-Law 7/2025 contains measures that aim to strengthen the resilience of the country's electrical system, including boosting electrification, storage and flexibility.

The Spanish government has approved a royal decree aimed at strengthening the power grid's resilience, robustness and stability in response to the nationwide blackout in April. Some of the measures passed in this latest royal decree were picked up from the previous one in June, which was ultimately.

The Spanish government has approved legislation to strengthen its electricity system following the major power outage the country experienced in April. Approved on 24 June by the Spanish government, the Royal Decree-Law 7/2025 contains measures that aim to strengthen the resilience of the country's.

The Spanish government approved Royal Decree 7/2025 on June 24, resolving several long-standing obstacles hindering the secure and lawful deployment of energy storage projects. This move responds to the large-scale blackout incident experienced by the country in April this year. The Spanish Battery.

Spain's Council of Ministers has approved a royal decree to promote energy storage, accelerate electrification, and tighten oversight of the national grid, says the Ministry for the Ecological Transition and Demographic Challenge (MITECO). From ESS News Spain's Council of Ministers has approved a.

This week, the Council of Ministers approved a new royal decree designed to strengthen grid resilience, promote energy storage, and streamline regulatory procedures for renewable and hybrid projects. The legislation, which integrates key elements of the earlier "Anti-Blackout Decree" (Royal.

Battery Energy Storage Systems (BESS) have emerged as a pivotal technology in the transition towards renewable energy, providing a reliable means to store and dispatch electricity. In Spain, the legislative framework governing BESS is evolving to support the growth of renewable energy sources. What is the future of energy storage in Spain?

In conclusion, the legislative landscape for BESS in Spain is evolving to support the country's ambitious renewable energy targets. While challenges remain, the combination of supportive policies, financial incentives, and technological innovation bodes well for the future of energy storage in Spain.

Will Spain strengthen its electricity system after a power outage?

The Spanish government has approved legislation to strengthen its electricity system following the major power outage the country experienced in April.

How does Spain align its energy policies with EU directives?

Spain, as a member of the European Union, aligns its energy policies with EU directives. The Clean Energy for All Europeans package, particularly the Renewable Energy Directive (RED II) and the Electricity Market Directive, sets the groundwork for integrating energy storage into the power system.

How does the Spanish government support Bess?

**Subsidies and Grants:** The Spanish government offers subsidies and grants for the deployment of BESS, particularly those integrated with renewable energy projects. These financial incentives are part of broader efforts to accelerate the energy transition.

Why is the Spanish electricity market adapting?

The Spanish electricity market has been gradually adapting to accommodate BESS. The market rules allow storage systems to participate in energy and ancillary services markets. This inclusion enables BESS to provide services such as frequency regulation, peak shaving, and voltage control, thereby enhancing their economic viability.

What does the energy storage package mean for the energy industry?

To promote the development of energy storage, the package proposes to speed up permits for projects, exempting them from the environmental assessment procedure if the facility is within the perimeter of a renewable

plant that already has a positive environmental assessment. This is something the industry has been requesting for some time.
