Steel structure factory solar system

Overview

What are solar panels made of?

All the profiles used in our solar panel structure systems are made of S350-GD galvanized structural steel (from Zn 450 up to ZnMg 310 gr/m²), corrosion resistant, have a very low weight and have a high strength. Because of this, the structure will last much longer than the solar panels mounted on it.

Why should you choose a metal structure for solar panels?

As solar panels are becoming more and more popular around the world, more and more businesses are looking to take advantage of them. The metal structures offered by us are ideal for photovoltaic panels (solar panels), and because they are made of light steel profiles designed and manufactured with high precision, the assembly becomes easy and fast.

Are solar carports environmentally friendly?

The use of steel to build the supporting structures for these solar carports makes it even more environmentally friendly, as steel is a durable and 100% recyclable material. The structural elements used are cold-formed, corrosion-resistant profiles, so these carport structures do not require any additional surface treatment.

What is Gonvarri solar steel?

Gonvarri Solar Steel's fixed photovoltaic structures are highly adaptable to any type of module and configuration. Our TracSmarT+ System is a revolutionary solar tracking system that automatically adjusts the orientation of solar trackers based on the sun's position to maximize output.

Who are solar steel & imports?

Solar Steel and Suports are the two companies in the group dedicated to designing and supplying ad hoc photovoltaic solutions for each type of project.

Can a solar system be fixed to a concrete ballast?

The system can be fixed to concrete ballasts according to the specified parameters. The system can be fixed with ground screws according to the specified parameters. Our experts carry out the design, numerical modelling and physical testing of components and complete systems for mounting solar panels.
