

## Kongres Container

# Substation Type Hybrid

## Overview

---

This modular approach to the construction of the substations is based on flexibility and customizability. The hybrid module can be used for extension or substitution in any traditional substation which uses an air-insulated busbar. This allows to configure the module with the components that are required by substation's architecture and scope of supply. Vice versa, it is also possible to install traditional air-insulated equipment in a hybrid substation.

A hybrid is an advanced electrical substation that combines both conventional air-insulated switchgear (AIS) and gas-insulated switchgear (GIS) technologies to optimize performance, space utilization and cost efficiency.
