# Sweden develops battery cabinet communication power supply

## Overview

---

When will a battery energy storage system be built in Sweden?

Construction has begun on Sweden's largest Battery Energy Storage System (BESS) undertaken by Neoen, an Independent Power Producer and Nidec, a system integrator. The project has been projected to come online in early 2025. Neoen is headquartered in Paris.

What is the largest battery energy storage system in Sweden?

The project is the largest in Sweden which is under construction. Image: Neoen. Independent power producer (IPP) Neoen and system integrator Nidec have started construction on a 93.9MW/93.9MWh battery energy storage system (BESS) in Sweden, the largest in the country.

Why is Sweden positioned for battery leadership?

Why Sweden is Positioned for Battery Leadership Sweden offers several structural advantages that support large-scale battery production and supply chain development. Abundant renewable energy: Hydropower and wind energy provide clean electricity at scale. Strong research ecosystem: Universities and R&D centers collaborate closely with industry.

How many energy storage facilities are there in Sweden?

The opening ceremony for one of the 14 facilities was held in Eskilstuna. The Role of Energy Storage in the Energy Transition Since 2023, Ingrid Capacity and BW ESS have been working together on 14 large-scale energy storage projects strategically located within Sweden's electricity grid in price zones SE3 and SE4.

Why should Sweden invest in energy storage?

"Sweden faces increasing electricity demand, which must be addressed by expanding carbon-free energy production, strengthening energy grids, and improving energy storage capabilities. It is an honor to inaugurate the largest

energy storage investment in the Nordic region.

How much electricity will Sweden use in 2045?

Sweden will consume more than twice as much electricity in the next 25 years, from the current 140 TWh to approximately 310 TWh in 2045. The most important energy source for new electricity generation capacity during this time is wind power. But the amount of electricity supplied to the electricity grid depends on how much the wind blows.
