# Tajikistan communication base station hybrid energy safety distance

## Overview

---

Renewable energy presents a sustainable solution for tackling both energy access and environmental issues. Hybrid off-grid systems appear to be a promising concept for addressing energy security.

Are base transceiver stations environmentally friendly?

The only electrical source currently in service in the Base Transceiver Stations (BTS) is a diesel generator. As a result, diesel generators are not economical and are not environmentally friendly. Therefore, these sites must integrate sustainable energy sources like wind and solar [ 4 ].

Are hybrid BTS sites good for Pakistan's telecom industry?

Hybrid BTS sites are, therefore, more economical and environmentally friendly regarding worries about global warming and long-term system functioning with no pollution. In conclusion, building improved BTS sites has positive technical, environmental, and financial effects on Pakistan's telecom industry.

Are base stations a threat to the safe operation of electric network?

Abstract: The ultra-dense deployment of base stations (BSs) results in significant energy costs, while the increasing use of fluctuating renewable energy sources (RESs) threatens the safe operation of electric network (EN). These issues can be addressed by coordinating BSs' active/sleep states with RES generation.
