Tanzania Energy Storage Project 2025

Overview

On March 1, 2025, Tanzanian President Samia Suluhu Hassan laid the foundation stone for a \$50 million liquefied petroleum gas (LPG) storage facility in Tanga, marking a significant milestone in the country's efforts to transition towards clean and sustainable energy solutions. What is the energy sector like in Tanzania?

The Energy sector in Tanzania began decades ago, laying a foundation for what has now become a robust and transformative sector.

How will Tanzania's energy mix change in 2023?

14.9 percent from the peak in 2023. Given expected demand growth of 5 to 10 percent per annum, Tanzania aims to further diversify its power mix by adding 2,463 MW of generation capacity from solar PV, wind, natural gas, and geothermal resources by 2030, as presented in the recently completed National Renewable Energy Strategy and Roadmap⁷.

How many MW does Tanzania have?

Starting with Hydro power Plant producing just 21 MW in 1967 and expanding to significant projects including Julius Nyerere Hydropower Project producing 2,115 MW to reach total installed capacity of 3,404.20MW as at January, 2025. Tanzania continues to make significant progress in connecting citizens to electricity.

How does Tanzania align its energy priorities with the FYDP III?

Tanzania aligns its energy priorities with the Third Five-Year Development Plan (FYDP III) by advancing industrialization, enhancing infrastructure, and fostering private sector growth. The compact's focus on sustainable energy solutions supports Vision 2025, which envisions a middle-income, energy-secure nation.

How many MW of electricity does Tanzania have?

Tanzania aims to diversify its electricity generation mix. As of December 2024, the total installed capacity of 3,404.20 MW comprised 2,011.27 MW hydro (59.1 percent); 1,198.82 MW natural gas (35.2 percent); 101.12 MW heavy fuel oil (HFO) and diesel (3 percent); 5 MW solar.

How many villages in Tanzania will be able to access electricity?

electricity access for 37 villages in Tanzania along the transmission line. Project comprises of 1) Construction of 49.5 MW hydropower plant, 2) 132 kV transmission line, 54 km long for power evacuation to the national grid, and 3) Distribution network expansion including rural electrification and last-mile connections.
