Overview

How will electricity be generated in Thailand?

Bangkok. power will be generated from natural gas, 20% from renewable energy, 9% from imported hydropower, and 12% from coal (including lignite). Energy conservation measures are expected to contribute to a 6% reduction in demand (Table 1). Sources: Electricity Generating Authority of Thailand. 2020.

How much power will Thailand have by 2037?

7. Forecast. According to Thailand's Power Development Plan for 2018-2037 (PDP 2018), total installed capacity is expected to reach 77,211 MW by 2037, including 56,431 MW of new capacity, which will help replace the 25,310 MW of capacity that is expected to be retired, in addition to expected growth in demand.

How much electricity does Thailand use a year?

Demand for electricity in Thailand grew by an average of 3.5% per year during 2009-2019. Total electricity consumption in 2019 was 190,090 gigawatt-hours (GWh), a 1.4% ADB. 2020. Energy Sector Review for Thailand (unpublished). Energy Regulatory Commission. 2019. Energy Regulatory Commission database. Accessed August 2019. Bangkok.

How much power does Thailand have?

Supply. As of April 2020, Thailand had installed generation capacity of 46,206 MW (including imports), of which 16,035 MW (35%) was accounted for by EGAT power plants; 14,948 MW (32%) by independent power producers; 9,502 MW (21%) by small producers; and 5,721 MW (12%) by foreign producers of imported power.

How many electric vehicle charging stations are there in Thailand?

There were 527 electric vehicle charging stations in Thailand at the end of

2019. As of this time, EA Anywhere (Energy Absolute's charging subsidiary) was the leading charging station provider with over 70% market share, followed by EGAT and ChargeNow (by BMW), with a combined market share of about 20%.

What is electricity demand in Thailand?

Electricity demand in Thailand has predictable seasonal and daily cycles. Annual peak demand is generally from March to May, during periods of high temperatures. The lowest loads are generally during the coolest months, in December and January. Industry has historically been the largest electricity consumer, followed by business and residences.³
