# The solar energy storage cabinet wall is shaking a little

## Overview

---

The main causes that lead to solar panel shaking include loosened mounting hardware, inadequate wind resistance, electrical system inconsistencies, and structural instability. How can we solve solar energy storage problems?

Solar energy storage problems can be addressed by several potential solutions. Lead-acid batteries, model, are one promising option. Other potential solutions include a smart grid system, sensible heat storage system, mechanical ways to store energy, underground thermal energy storage system, and Electrochaea plants. Let's explore each one in detail. Lead-acid batteries, model.

Why is solar energy production facing challenges?

Although the solar energy generation capacity is increasing and prices are decreasing, its storage problem is holding it back. Solar energy cannot always be generated in the same capacity due to cloudy atmospheres or night time. Consequently, supply and demand balance cannot be maintained.

Does solar energy have a storage problem?

Solar energy is gradually revolutionizing the energy world, but it faces a significant challenge: the storage problem. Although the energy generation capacity is increasing and prices are reducing, the inconsistent availability of solar energy due to cloudy atmospheres or night time hinders its widespread adoption.

How to store excess energy produced by a solar system?

Excess energy produced by a PV solar system or DG (Distributed Generation) can be stored in batteries. These batteries are advantageous because they are widely available anywhere in the world or have a relatively lower initial cost. The use of a smart grid system is also mentioned.

How to store energy underground thermal energy storage system  
Electrochaea plants?

Underground thermal energy storage system using Electrochaea plants is a mechanical way to store energy. Electrochaea plants are used to store excess energy produced by solar systems, specifically PV or DG systems. Let's dive into each one.

Are battery storage loopholes a problem?

Despite having some issues, such as the batteries becoming less useful as they get bigger and the potential danger of storing them for long periods of time, batteries are still being used extensively for storing large off-grid solar energy. The problem is the bigger the battery gets, it could also escalate the dangerous situation when you store it for a longer time.
