# Two wind power generation systems

## Overview

---

A NYISO study conducted in 2010, Growing Wind: Final Report of the NYISO 2010 Wind Generation Study (Sept. 2010), found that the New York power system will allow for the integration of up to 8,000 MW of wind generation with no adverse reliability impacts. Overview New York has 2,192 MW of installed wind power capacity as of 2022. Most of New York's wind power is located in upstate New York as onshore wind farms. New York has set a goal of developing 9,000 MW of offs.

The first wind farms in New York came online in 2000. They were relatively small projects. Madison Wind Farm, with a nameplate generating capacity of 11.55 MW, located in Madison County, was the first to com.

Wind is a very powerful element in society, and is able to provide energy without emitting greenhouse gases. Therefore, able to make a valid contribution to electricity demands. More than a quarter of power of the athletic.
