Ukrainian large-capacity lithium battery pack

Overview

Does Ukraine need a lithium industry?

Since Ukraine is one of the few countries with large lithium reserves (according to estimates, up to 10% of world reserves) and is in dire need of resources for economic development, conversations about the prospects for the development of the lithium industry have become noticeably more frequent.

Where is lithium found in Ukraine?

In Ukraine, significant lithium reserves were discovered in the 1980s at two deposits — Polokhivske (petalite ores, Kirovohrad region) and Shevchenkivske (spodumene-petalite ores, Donetsk region), as well as at the Dobra site (petalite-spodumene ores, Kirovohrad region).

How long does it take to mine lithium in Ukraine?

The Ukrainian lithium mining procedure includes the following stages: carrying out geological exploration of deposits according to international standards to confirm data from the times of the USSR. It will take 3-5 years and \$10-15 million for one deposit.
