# Vanadium flow battery fluid standards

## Overview

---

This Standard specifies the requirements for electrolyte for vanadium flow battery, test methods, inspection rules and marks, packaging, transportation, storage and the contents of quality certificates and order sheets (or contracts). What is vanadium flow battery technology?

Vanadium Flow Batteries use vanadium flow battery technology, a rechargeable flow battery technology that stores energy using the ability of vanadium to exist in solution in four different oxidation states. This property of vanadium allows it to produce batteries with.

Why do vanadium flow batteries have low self-discharge rate?

Vanadium flow batteries have a low self-discharge rate because the electrolyte is stored in sealed tanks that are kept separate from the main battery unit. With this setup, no internal reactions can occur and cause power loss when the battery is not connected to a load.

Are vanadium flow batteries better than lithium-ion batteries?

Vanadium flow batteries are gaining attention in the media, various industries, and even the general public for the many benefits over lithium-ion batteries. Those benefits include longer life, very little degradation of performance over time, and a much wider operating temperature range. All of which significantly reduces the cost of ownership.

What is the round trip efficiency of vanadium flow batteries?

The round trip efficiency of vanadium flow batteries is 75%-85%. This is considering pumping losses and intricate reactions happening in these batteries. Although this is not so bad, it is way below what other batteries such as lithium-ion offer.

Are vanadium flow batteries recyclable?

With vanadium flow batteries, all parts and components have a recyclability

factor close to 100%. The electrolyte can be processed and reused; 100% of the vanadium can be extracted and reused for other applications with no impact on primary mining. Also, these batteries contain no toxic metals such as lead, cadmium, zinc, and nickel.

How much does a vanadium flow battery cost?

“The battery pack portion of it is less than \$200/kWh. Power electronics and servicing over 15 to 20 years take the price up to roughly \$300/kWh. However, it would not be accurate to compare a vanadium flow battery cost alone to the cost of lithium battery plus power electronics and 15 to 20 years servicing.”
