What are the electric energy storage systems in Ireland

Overview

The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key stakeholders and timelines for these actions.

The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key stakeholders and timelines for these actions.

We represent Ireland and Northern Ireland's energy storage industry bringing together exciting new technologies and innovations that will help decarbonise our energy system and support a strong, stable, electricity grid.

This policy framework presents 10 government actions to support the role of electricity storage systems in the energy transition. These actions are detailed below:.

At Energy Storage Ireland 2025, the message was clear: energy storage is central to a stable, low-carbon grid, and while short-duration battery systems (BESS) are available, long-duration storage (LDES) supply is in its infancy, however ESN has a structure to enable LDES rollout in Ireland.

In this regard, greater emphasis is placed on ensuring 'long duration' electricity storage systems – systems that have the capacity to deliver electricity throughout at least a four-hour period – are integrated into Ireland's electricity grid.
