What are the wind power and solar energy storage projects

Overview

Governor Kathy Hochul today announced that contracts have been executed for 23 large-scale land-based renewable energy projects that will provide more than 2.3 gigawatts of clean energy, which is enough to power more than 700,000 homes throughout New York State.

Governor Kathy Hochul today announced that contracts have been executed for 23 large-scale land-based renewable energy projects that will provide more than 2.3 gigawatts of clean energy, which is enough to power more than 700,000 homes throughout New York State.

The New York Power Authority's draft strategic plan for expanding the state's renewable energy resources proposes 40 projects representing 3.5 GW of capacity from solar, onshore wind and.

Gov. Kathy Hochul today announced that contracts have been executed for 26 large-scale land-based renewable energy projects that, upon completion, will provide more than 2.5 GW of clean energy, enough to power more than 670,000 homes throughout New York State.

In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and Massachusetts will account for almost half of 2025 wind capacity additions.

Together with projects identified in the plan approved in January, the updated plan now highlights 64 clean energy projects with a total capacity of almost 7 GW. These include 17 solar arrays, three wind projects and 156 energy storage projects across all regions of the state.
