What is the Dominica Power Plant Energy Storage System

Overview

The BESS, with a combined capacity of 6MW/6MWh, will greatly enhance DOMLEC's ability to manage the electricity grid more efficiently, provide spinning reserve, and support the stability of the system — particularly as Dominica transitions towards a renewable energy future.

The BESS, with a combined capacity of 6MW/6MWh, will greatly enhance DOMLEC's ability to manage the electricity grid more efficiently, provide spinning reserve, and support the stability of the system — particularly as Dominica transitions towards a renewable energy future.

Illustration of a sustainable energy concept in Dominica Dominica is taking a pragmatic step towards energy security and sustainable development, aligning with the global shift towards decarbonisation and infrastructure modernisation. The commissioning of a 6 MW / 6 MWh Battery Energy Storage.

From Wednesday 30th April to Sunday 4th May 2025, Dominica Electricity Services Ltd. (DOMLEC) will be conducting critical testing of a recently installed Battery Energy Storage System (BESS) at its Fond Colé Power Plant, as the company enters the final stages of commissioning this battery system.

In 2025, the Independent Regulatory Commission (IRC) will conduct site visits to assess various electricity generation projects, as part of its mandate to ensure a reliable and adequate electricity supply. The goal of these projects is to build generation capacity to meet the increasing demand for.

This agreement follows the Government of the Commonwealth of Dominica's successful development of the geothermal reservoir in the Roseau Valley. At the end of the agreement term, ownership of the power plant will be transferred to the Government of This document presents Dominica's Energy Report.

What is Dominica Electricity Services Limited (domlec) interconnection policy?

This “Interconnection Policy” describes the process and requirements of

Dominica Electricity Services Limited (DOMLEC) for any Customer who desire to connect a Distributed Generating (DG) Facility through the customer.

Project Overview and Methodology o The objective of this work is to identify and describe the salient characteristics of a range of energy storage technologies that currently are, or could be, undergoing research and development that could directly or indirectly benefit fossil thermal energy power. Does Dominica have a national energy plan?

Dominica drafted a National Energy Plan in 2011 and revised it in 2014 to state its objective of using sustainable and indigenous resources to make electricity generation on the island self-sufficient by 2020.

Will a geothermal plant reduce electricity bills in Dominica?

The government also says that the geothermal plant will reduce electricity bills. And it is not just Dominica (not to be confused with the similarly named Dominican Republic), that is set to benefit. Long-term plans include exporting surplus electricity via undersea cables to neighbouring islands.

Is Dominica's geothermal project a 'bold and visionary step'?

OECS Director General Dr Didacus Jules describes Dominica's geothermal project as a "bold and visionary step". "As a region heavily dependent on imported fossil fuels, the transition to green energy is not optional - it is existential," he tells the BBC.

Will Dominica's geothermal plant be the second in the Caribbean?

Dominica's geothermal plant will be just the second in the Caribbean. Guadeloupe, an overseas department of France, has had a 15-megawatt station in operation for three decades.
