# What is the size of the solar panels in the Grenada power station

## Overview

---

Solar panel size refers to the total amount of power a solar panel can generate over a period of time; Solar panel dimensions refers to the physical size of a solar panel; Solar panel sizes and wattage range from 250W to 450W, taking up 1.6 to 2 square metres per panel.

exceeds 5 kWh/square meters per day. A 2- to 4-MW PV installation is planned, but no utility-scale solar plants are currently in operation and are similarly stalled in development. Solar photovoltaics (PV) have high potential on Grenada because the country's global horizontal irradiation exceeds regional.

It is the southernmost island of the Windward Islands, and is about 160 kilometres (99 miles) north of Venezuela. Grenada consists of the island of Grenada itself, two smaller islands, Carriacou and Petite Martinique, and several small islands which lie to the north of the main island and are a.

A solar electric system converts sunlight into electricity using solar cells. Solar panels can be mounted on rooftops or the ground, and convert particles of light energy, known as photons, into direct current (DC) electricity. An inverter changes DC power into alternating current (AC) to power.

Grenada is seeking an independent power producer (IPP) to build and operate a 15.1 MW utility-scale PV project for 25 years. The plant, planned near Maurice Bishop International Airport, will supply about 40% of the island's peak load. Grenada has launched a tender for a 15.1 MW PV project in a bid.

This profile provides a snapshot of the energy landscape of Grenada—a small island nation consisting of the island of Grenada and six smaller islands in the southeastern Caribbean Sea—three of which are inhabited: Grenada, Carriacou, and Petite Martinique. The 2015 electricity rates in Grenada are.
