How many nuclear reactors does the Czech Republic have?

The Czech Republic already relies on six nuclear reactors to generate more than a third of its total electricity. Besides the four in Dukovany, state-controlled power company CEZ operates another two 1,000-megawatt reactors at the Temelin plant. CEZ will be in charge of the tender.

Why should the Czech Republic invest in nuclear power plants?

The construction of new nuclear power plants, the largest investment in the history of the Czech Republic, has the potential to become a huge stimulus for the economy, for the expansion of education, research and development, and for development in the regions concerned.

Why is the Czech Republic doubling down on nuclear power?

Unlike its western neighbors Austria and Germany, the Czech Republic is doubling down on nuclear power and renewable energy sources after deciding to phase out coal as a fuel for energy generation by 2033 in order to reduce carbon emissions.

How will the nuclear project impact the Czech economy?

In addition to the fundamental development of the Czech energy sector, this project will also become an important stimulus for the Czech economy. "According to some estimates, every crown invested in the construction of nuclear units will bring up to three crowns to the Czech economy through downstream investments.
