# Which market is bigger solar or energy storage

## Overview

---

The residential solar energy storage market has a market share of 66% in 2024. Rising property values associated with solar-plus-storage installations coupled with the growing number of homeowners prioritizing energy self-sufficiency will elevate the business landscape.

The residential solar energy storage market has a market share of 66% in 2024. Rising property values associated with solar-plus-storage installations coupled with the growing number of homeowners prioritizing energy self-sufficiency will elevate the business landscape.

The global solar energy storage market was valued at USD 93.4 billion in 2024. The market is expected to reach USD 378.5 billion in 2034, at a CAGR of 17.8%. Government incentives for solar-plus-storage installations and net metering policies enhancing storage demand along with rising environmental.

The United States Energy Storage Market size in terms of installed base is expected to grow from 49.52 gigawatt in 2025 to 131.75 gigawatt by 2030, at a CAGR of 21.62% during the forecast period (2025-2030). The United States Energy Storage Market's growth is propelled by the 30% Investment Tax.

The U.S. energy storage market generated 48.3 GW in 2024, and this is expected to increase to 120.3 GW by 2032, advancing at a CAGR of 12.2% during 2025-2032. This is due to the increasing integration of renewable sources of energy, such as wind and solar, which require energy storage for supply.

The United States energy storage market stands at a pivotal transformation point, driven by unprecedented growth in renewable energy integration and declining battery technology costs. In 2023, the market reached a significant milestone of 35 gigawatts (GW) of installed capacity, with projections.
