# Will solar panels be cheaper

## Overview

---

Solar panels, once an expensive product, are now the cheapest they have ever been, with prices declining every year worldwide. This dramatic decline is a huge win for sustainability. Are solar panels cheaper than grid electricity?

Self-generated solar power is already cheaper than grid electricity almost everywhere, making home solar systems economically attractive. Solar module prices have fallen more than 99.8% since 1976. Study of almost 3,000 forecasts has revealed just how unambitious analysts have been in predicting solar panel price declines.

How much do solar panels cost?

The cost of solar panels has fallen by 99% since the 1970s, from about \$100 per watt (£77.09) to just under \$0.20 per watt (£0.15) today. Government incentives and policies have contributed to 60% of the overall decline in solar panel costs worldwide, with half of that coming from government-backed funding.

Why do solar panels cost so much in the UK?

Several key factors have impacted the cost of solar panels in the UK over the past ten years: Government incentives: As of 2019, the Feed in Tariff (which paid homeowners and businesses for generating renewable energy) ended. This resulted in a decrease in installation and, therefore, a decrease in overall cost.

Are solar panels a good investment?

For homeowners and businesses, this means: Lower Energy Costs: With increased efficiency, today's solar panels produce more electricity, resulting in greater energy savings. A high-efficiency panel converts more sunlight into electricity, which reduces dependence on the grid and lowers monthly utility bills.

Why are solar panels so expensive?

Solar panel prices have fallen by approximately 20% every time global capacity has doubled, following a trend known as Wright's Law. Solar panels can convert 22% of sunlight into electricity, whereas the first solar panels could only convert 1-2% into electricity. This has helped drive down costs as the panels are more efficient.

Are solar panels cheaper in 2025?

In 2025, solar panels are cheaper and more efficient than ever! Solar panels becoming more affordable will be a key player in the expansion of residential solar, contributing to the combat against climate change - and higher efficiency ratings can help keep costs down and guarantee customers will be getting the best outcomes possible!
